

With Prime's telemedicine, doctors are making house calls yet again; though in a much faster and convenient way than was done decades ago. The telemedicine framework facilitates patient/physician integration via web-based, mobile, and in-person modes, allowing a patient to communicate with their physician of choice regardless of their location. Following consultation, the physician can fill the patient's prescription electronically and the patient can pay for their prescription via their recorded insurance/credit card information, making the telemedicine framework a one stop shop for healthcare services and pharmaceutical

Features:

- Remote Patient Monitoring
- Store and Forward Information
- Interactive Real-Time Video Communication
- Photo Sharing/Upload Capabilities
- Store and Transfer Clinical Data From One Location to
- Cloud Framework Services
- Mobile and Tablet Friendly
- Dynamic User Interface
- Easy Customization

Delivering **successful, Reliable, Cost-effective** solutions
